HIPLAAD

PV Cell & Metal paste dispersions
(like Ag, Ni, etc.)

ED - ELECTRONICS DISPERSANTS

which increases solid contents and keeps particle size stable for long period of time. These grades are suitable for Hi-Refractive index material like Ni Paste.

ET - ELECTRONICS THIXOTROPE

for controlling viscosity, preventing hard caking and sedimentation of paste and slurry which contributes to improve fine-line property and increasing printing thickness of screen printing like preparation of Silver Paste.

Iron oxide pigment

Iron Oxides Pigments for Cosmetics [BC, RC, YC Series]

FEATURES The BC, RC, and YC series are iron oxides for cosmetics based on our color pigment "TODA COLOR". The heavy metal content is reduced to a level for cosmetics. You can use them safely and securely since they comply with the European food additive regulation on iron oxides and iron hydroxides (E-172).

CHARACTERISTICS

- 1 **High purity**
We can stably supply high purity products by controlling their heavy metal content.
- 2 **High coloring power**
Due to their high coloring power and weather resistance, color phase does not change for a long time.
- 3 **High dispersibility**
Customer's target color can be obtained evenly in a short time since they are used with low oil absorption.

SPECIFICATIONS

[Color swatches of BC, RC, and YC series]

Brand	Mass tone	Tint*1 tone	Chemical formula	INCI Name*2
BC-335			Fe ₃ O ₄	Iron oxides (CI77499)
